SUGGESTED CARE AND MAINTENANCE INSTRUCTIONS FOR LOCKERS

LOCKER CARE

- 1) Clean the lockers:
 - a. Unplug all devices as well as the main power cord of charging lockers prior to cleaning. Use caution when cleaning around electrical components.
 - b. Dust lockers inside and out as necessary.
 - c. Powder coated items should be cleaned occasionally with mild detergent soap and water. Harsh chemicals and solvents are unnecessary and can damage the finish. Use a wet sponge or a soft, non-abrasive bristle brush to loosen stubborn dirt.

- 2) Preventive Care:
 - a. Install lockers in a well-ventilated indoor area.
 - b. Anchor the lockers securely to the wall and/or floor to prevent them from falling over. This will damage the lockers and you will have to have them serviced or replaced.

INSPECTION AND MAINTENANCE

- 1) Safety Inspection:
 - a. Verify that locker is securely mounted/fastened to substrate and that fasteners/anchors are not coming loose. Tighten or replace mounting hardware as necessary.
 - b. Periodic material inspection should be made maintaining or replacing missing, inoperable, broken, bent or loose parts including locks, locking mechanism, doors, and pads.

- 2) Missing or broken parts:
 - a. Replace any worn or broken parts by contacting Precision locker or your dealer.
 - b. Replacement parts can be purchased from Precision Locker.
